

TRANSVERSAL COMPETENCIES

An analysis was made for the overall sector in terms of transversal competencies, meaning the soft competencies and general basic competencies.

Transversal competencies refer to a set of skills that cut across different domains and enable individuals to apply their knowledge in diverse and changing contexts. In the battery industry, these may include critical thinking, digital literacy, and intercultural competencies.

Soft competencies refer to personal skills, attitudes and behaviors that enable individuals to effectively navigate complex situations, communicate and collaborate with others, and continuously learn and adapt. In the battery industry, these may include teamwork, problem-solving, communication, or presentation skills.

Both soft and transversal competencies play a crucial role in enabling workers to thrive in a rapidly changing and increasingly complex industry landscape.
