

MAINTENANCE ENGINEER

A battery production maintenance engineer is responsible for the maintenance and repair of equipment and machinery used in the production of batteries.

They work in battery manufacturing plants and are responsible for ensuring that the equipment is operating efficiently and effectively to produce high-quality batteries.

They need to have a strong understanding of mechanical, electrical, and control systems engineering, as well as experience with maintenance, repair, and troubleshooting of production equipment. They also need to be familiar with safety protocols, regulations, and industry standards related to battery production.
